Your Kidneys Pump More than 50 Gallons of Blood Daily
Your kidneys may be small, but they do quite a bit of work! The kidneys are responsible for removing waste and excess liquid from the body by filtering them out from your blood. Your kidneys filter through about 52 gallons (200 liters) of blood throughout a given day!
They Regulate Your Body's Salt Content
Along with filtering out waste from your blood, your kidneys also help regulate your body's sodium levels. However, it is important to keep in mind that it is possible to take in more salt than your kidneys can safely remove from your body. While salt is essential for your body to function properly, excess amounts can be damaging to your body, leading to heart disease, stroke, and even kidney failure.
Kidney Disease, a huge burden
Kidney disease remains a huge burden on the society and it is estimated that about 10% of the adult population has some form of kidney disease and 200,000 people get afflicted with severe kidney disease (end stage kidney disease) every year
kidney disease, preventable?
Many kidney diseases are preventable if detected early and certainly the progression of kidney disease can be slowed down with good control of diabetes, hypertension, lifestyle modifications, dietary measures and avoidance of medicines that are toxic to the kidneys
